

US Navy Meets Peer Standards

For Sealift Logistics Command Pacific, SOLUTIONZ video solution provides a seamless Audio Visual environment for team meetings

The Company

Sealift Logistics Command Pacific (SEALOGPAC) exercises operational control over Military Sealift Command ships operating in the eastern Pacific. These ships support the U.S. Navy's Third Fleet by delivering equipment and supplies to ships underway, allowing them to remain deployed for longer periods of time.

Ships under SEALOGPAC's control also transport vital military cargo to forces ashore overseas and support special Department of Defense missions such as the 2005 and 2006 humanitarian deployments of hospital ship USNS Mercy.

The Need

SEALOGPAC needed a drastic upgrade to the roll-about video conferencing system they had been using, as it was too small for their very large conference room.

Due to the nature of their other locations, they wanted to take advantage of their current technology. However, SEALOGPAC wanted to rise to the standards of their peer locations and create a conference room that would provide a seamless Audio Visual environment for team meetings.

The Solution

SOLUTIONZ fitted the Commodore Conference room with four 60" plasma

screens and a projection screen to deliver video to team members seated anywhere within the conference room. An array of microphones, speakers, and audio amplifiers were used to pickup and deliver audio to conference participants. And a touch-screen, seamlessly integrated into SEALOGPAC's Commodore Conference Room, was used to control all equipment.

The Benefits

Through the use of this newly-equipped room, each SEALOGPAC conference attendee can now hear and see every aspect of the presentation or conference, while simultaneously being heard and seen from anywhere within the room.

Each plasma screen projects video images while the projection screen allows attendees a better view of important data, and all is controlled by the single touch of a Crestron wireless touch-panel.

CHALLENGE

A drastic upgrade to the roll-about video conference system they had been using to meet the standards of their peer locations

DECISION

SOLUTIONZ integrated system consisting of plasma screens, an array of microphones, speakers, and audio amplifiers, and a Crestron wireless touch-panel

RESULTS

Seamless Audio Visual team meetings; each attendee the ability to see and hear and be seen and heard; single touch control of the entire room

Each SEALOGPAC conference attendee can now hear and see every aspect of the presentation or conference while simultaneously being heard and seen from anywhere within the room.
